

Cellpose-SAM: total inference latency and speedup

Reference: Cellpose main a54cb48 · bfloat16 network · native diameter

Bars/large markers: medians. Latency whiskers: repeat min-max. Speedup whiskers/dots: paired repeat range/samples.

Δ = optimized – reference (negative means less time). 5 synchronized repeats; batch size 8; RTX PRO 6000 Blackwell.

Public Cellpose test fixtures · All candidate mask bytes match the reference · Model loading and image decoding excluded
