

Cellpose 3 (cyto3): optimized inference preserves mask labels

Public 2D images; cell diameter setting: 30 pixels; FP32; flow QC and iteration settings retained

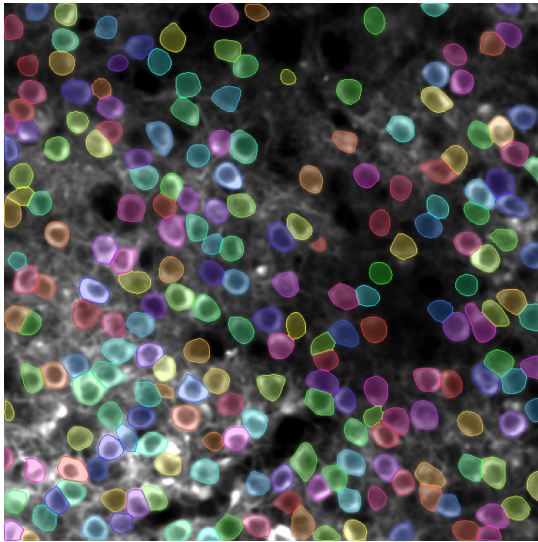

Input image

Upstream cell masks

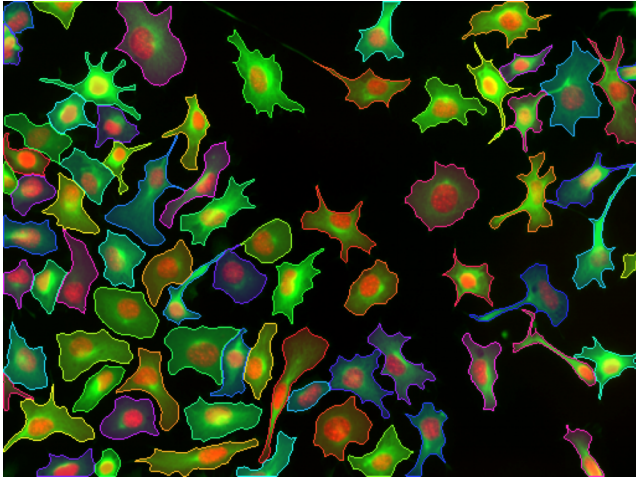

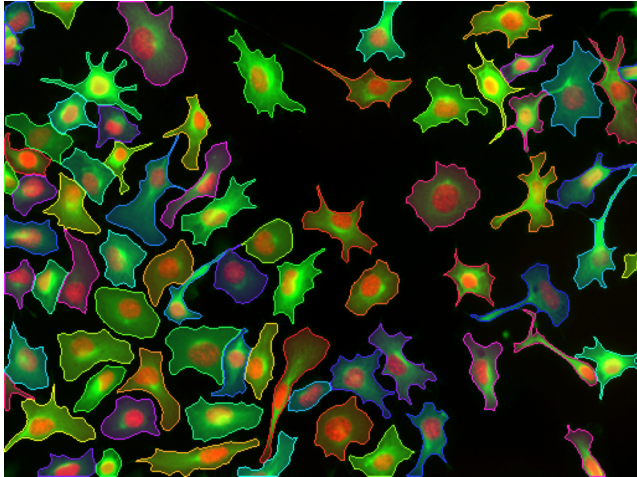

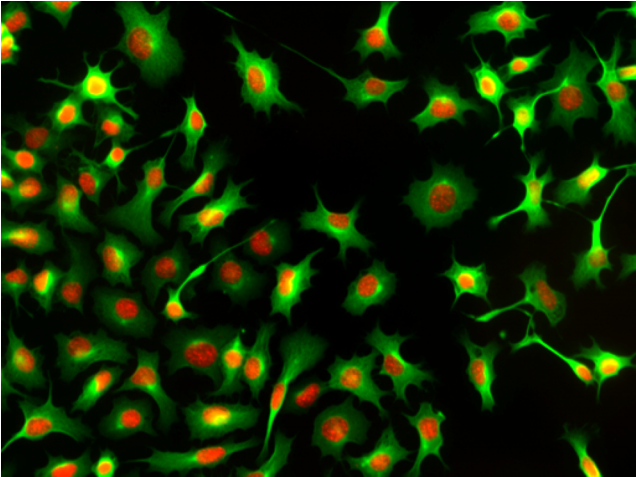

Optimized cell masks

Label difference map

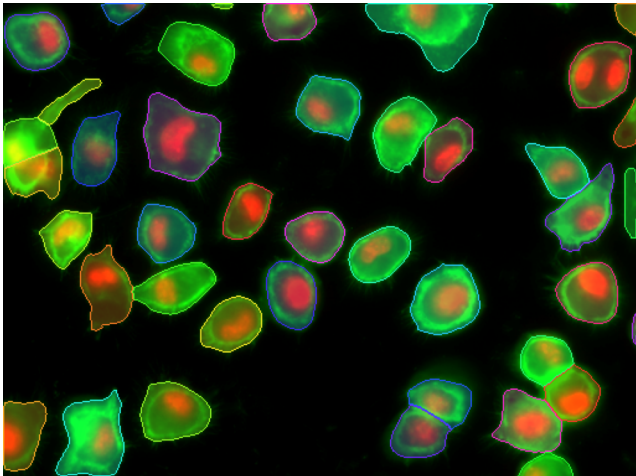

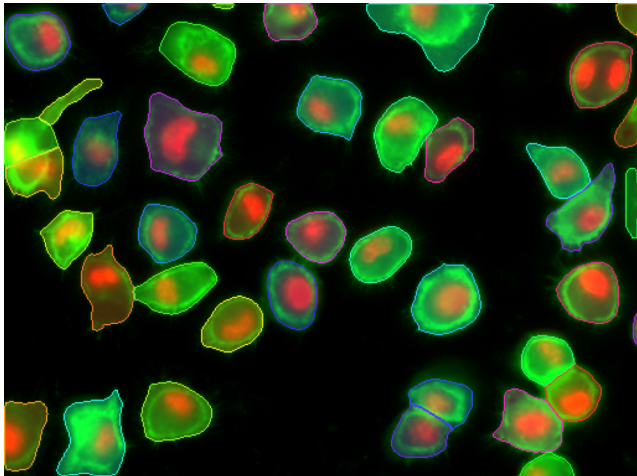

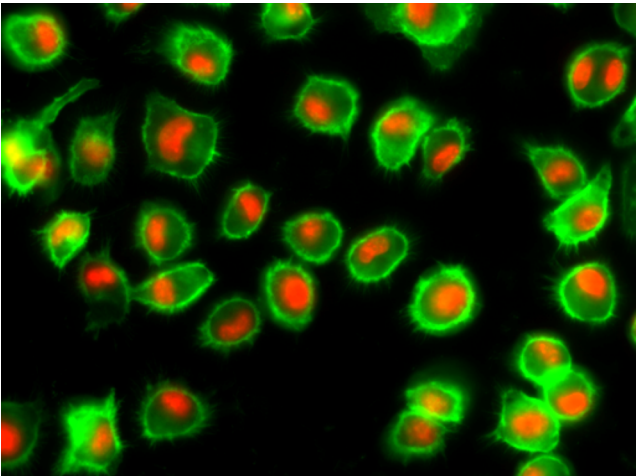

0 changed label pixels
217 cells in each output
Bitwise identical: yes

RGB PNG
383 x 512 pixels

0 changed label pixels
75 cells in each output
Bitwise identical: yes

RGB TIFF
384 x 512 pixels

0 changed label pixels
41 cells in each output
Bitwise identical: yes

Matching colors denote the same cell label. Equality checks include every pixel, label ID, array shape and dtype.

Same label Different label

Both outputs come from the same model/input/settings; only steps_interp and get_masks_torch are substituted.
